

Practical AI Workflows

Hands-on workflow training for writing, planning, research support, meeting preparation, and everyday knowledge work.

Format	Two 90-minute Zoom sessions or one half-day remote workshop.
Audience	Teams and professionals who already understand the basics and want practical routines they can reuse.

Learner outcomes

- Build repeatable workflows for common work without copying sensitive data into public tools.
- Use AI to generate first drafts, alternatives, summaries, meeting artifacts, and decision support.
- Develop review habits that keep the human responsible for quality, context, and final judgment.

Curriculum modules

Workflow anatomy

We break a task into input, constraints, AI assist, review, revision, and final human decision.

Writing and rewriting

Participants practice using AI for tone, structure, audience adaptation, and first-pass drafting.

Research support without overtrust

We separate brainstorming, query planning, summarization, source checking, and final verification.

Meetings and decisions

Participants create safe workflows for agendas, prep notes, follow-up drafts, and option comparison.

Materials to develop

- Workflow recipe cards
- Meeting preparation worksheet
- Research triage checklist
- Before-and-after prompt examples

Diagram candidates

These are intentionally left as candidate visuals until diagram parameters are chosen.

- Human-in-the-loop workflow map
- Meeting-to-action pipeline

Session design reminders

- Keep examples non-sensitive and realistic.
- Emphasize education, judgment, review, and careful experimentation.
- Do not promise legal, medical, compliance, cybersecurity, or automation outcomes.
- Name when a stronger tool, private environment, or policy decision is needed before proceeding.

API and tool boundary

This curriculum companion does not require an API call. Any secure password protection, private client portal, or live AI workflow exercise that transmits data to an external model should be reviewed before implementation.
