

From Frozen Fingers to Wow

A teacher's guide for helping complete beginners discover AI's potential

Teacher Guide

30 step-by-step classroom activities with copy-ready prompts and high-wow AI products

This guide gives teachers 30 classroom activities that begin with nervous first keystrokes and build toward polished, surprising products. The thread running through every activity is simple: students should not merely ask AI for answers. They should learn to direct it, question it, verify it, improve it, and transform its output into something useful.

Use a school-approved AI system and follow local policy. Students should avoid private information, names, grades, health details, addresses, passwords, and anything they would not want stored or reviewed. Treat AI output as a draft, not authority.

Quick Start

- Best fit: grades 6-12, higher education, adult education, or professional learning, with adaptation.
- Class rhythm: demonstrate briefly, let students try, compare outputs, revise prompts, use the provided prompt ladder, and reflect.
- Teacher stance: praise curiosity, ask for evidence, and require students to explain final choices.
- Evidence of learning: prompt drafts, AI outputs, verification notes, revised products, and short reflections.

The 30-Activity Pathway

Stage	Activities	Main teacher move
Comfort	1-6	Lower fear, make first prompts feel safe, visible, and useful.
Prompt Craft	7-12	Show that prompts can be designed, compared, scored, and improved.
Judgment	13-18	Build verification, bias awareness, critique, and responsibility.
Creation	19-24	Turn AI output into artifacts, media plans, data stories, and proposals.
Wow Build	25-30	Chain tools into personalized coaches, websites, app ideas, and capstones.

Prompt Quality Rubric

Use this five-part rubric for prompt tournaments, peer review, quick grading, or student self-assessment. A strong prompt does not need to be long. It needs to tell the AI what success looks like.

Criterion	4 - Strong	2 - Developing	0 - Missing
Goal	Task and desired outcome are explicit.	Topic is present but purpose is fuzzy.	No clear task.
Audience	Reader, level, and tone are named.	Audience is implied.	No audience.
Context	Useful background and constraints are included.	Some context, but gaps remain.	AI must guess.
Format	Output structure is specific and usable.	Format is vague.	No format requested.
Quality check	Prompt asks for criteria, critique, or verification.	Some quality language.	No way to judge success.

Beginner Prompt Frame

Act as [role] to help [audience] understand or create [goal]. Use [context]. Include [requirements]. Format as [format]. Before finalizing, check for [quality criteria].

Classroom Norms

- Do not paste private information into AI systems.
- Do not trust a response because it sounds confident.
- Do not let AI replace your own thinking, taste, responsibility, or voice.
- Do use AI to ask better questions, generate options, explain complexity, critique drafts, and build products.

The Activities

Each activity can stand alone, but the sequence is designed to build confidence, craft, judgment, and creative ambition. Each activity includes a classroom flow plus copy-ready prompts. Replace bracketed text with the topic, draft, data, or question students are using.

Comfort - Lower fear, make first prompts feel safe, visible, and useful.

01. The First Safe Hello

Stage: Comfort Time: 20-30 minutes Core skill: Starting a conversation with AI

Materials: School-approved AI tool, projector, student notes

Goal: Students experience AI as an interactive helper rather than a search box.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Ask each student to choose a harmless familiar topic: a sport, hobby, game, food, animal, book, or skill.
3. Students type: "Explain [topic] to me like I am brand new, then ask me one question."
4. They answer the AI question and ask one follow-up beginning with "Can you make that..."
5. Pairs compare how their second prompt changed the response.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Start	Explain [topic] to me like I am brand new. Use one everyday example. Then ask me one friendly question to check what I understand.	
Follow-up	I answered: [student answer]. Correct any misunderstanding gently, then explain the next idea I should learn in three sentences.	
Wow	Explain the same topic at three levels: for a five-year-old, for a high school student, and for an expert. Put the differences in a table.	
Wow extension		Debrief
Have students ask the AI to explain the same topic in three levels: for a five-year-old, for a high school student, and for an expert.		What changed when you answered the AI's question? What did the AI do well? Where did it still need you?

02. Tiny Prompt, Better Prompt

Stage: Comfort Time: 30 minutes Core skill: Adding context, audience, and format

Materials: Shared board or document

Goal: Students see that prompting is a design skill, not magic wording.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Begin with a one-word prompt such as "volcanoes" or "homework" and show the weak result.
3. As a class, add one improvement at a time: role, audience, goal, constraints, tone, and output format.
4. Students repeat the ladder with their own topic and save each version.
5. Pairs underline the sentence in their prompt that made the biggest difference.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.

7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Start	Give me a beginner explanation of [topic].
Improve	Rewrite my prompt so it includes a clear goal, audience, context, constraints, tone, and output format. Then explain why each part helps.
Template	Turn the improved prompt into a reusable fill-in-the-blank template for students studying any topic.
Wow extension Ask AI to turn the best prompt into a reusable template with blanks any student can fill in.	Debrief Which details gave you more control? Which details were unnecessary?

03. AI as a Patient Tutor

Stage: Comfort Time: 35-45 minutes Core skill: Learning through back-and-forth dialogue

Materials: Current class topic or review topic

Goal: Students practice asking for help without embarrassment and checking understanding.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Students choose one concept they find confusing from any class.
3. They prompt: "Tutor me on [concept]. Start with the basics, use one example, then ask me a question to check my understanding."
4. Students answer the AI's question and ask for correction.
5. They request a new explanation using an analogy connected to something they enjoy.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Start	Tutor me on [concept]. Start with the basics, use one example, and ask me one question before moving on.
Check	Here is my answer: [answer]. Tell me what is correct, what is missing, and the next small step I should practice.
Practice	Create a three-question mini-quiz on [concept]. Wait for my answers, then grade them and recommend what to review next.
Wow extension Have AI create a three-question mini-quiz, grade the student's answers, and recommend the next study move.	Debrief How did it feel to practice privately? What made the AI's feedback useful or not useful?

04. Question Storm

Stage: Comfort Time: 30-40 minutes Core skill: Turning curiosity into investigable questions

Materials: Sticky notes or digital board

Goal: Students learn that strong AI work often begins with better questions.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. The class chooses a broad theme such as music, climate, fashion, space, sports, health, or games.
3. Students ask AI for 20 curious questions about the theme for beginners.
4. They sort questions into categories: factual, creative, personal, ethical, technical, and debatable.

- Each student rewrites one question to make it more specific and more interesting.
- Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
- Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Start	Generate 20 curious beginner questions about [theme]. Mix factual, creative, ethical, technical, personal, and debatable questions.
Sort	Sort these questions into categories and mark the five with the strongest research potential: [questions]. Explain your ranking.
Sharpen	Rewrite this question so it is specific, researchable, and interesting to a class audience: [question].
Wow extension Ask AI to rank the revised questions by research potential and explain the ranking.	Debrief Which questions made you want to keep working? What makes a question too broad?

05. Everyday Task Transformer

Stage: Comfort Time: 30 minutes Core skill: Using AI for practical planning

Materials: Student notebooks or devices

Goal: Students discover that AI can turn vague intentions into usable plans.

Step-by-step classroom flow

- Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
- Students choose an everyday task: studying, cleaning a backpack, practicing an instrument, preparing for tryouts, or planning a weekend project.
- They ask AI to turn the task into a realistic checklist with time estimates.
- They revise the prompt so the plan fits their real schedule, energy level, and constraints.
- Students mark which steps they would actually do and which are unrealistic.
- Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
- Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Start	Turn this everyday task into a realistic checklist with time estimates: [task]. Assume I am a beginner and have limited time.
Personalize	Revise the checklist for these constraints: [available time, energy level, deadline, tools, obstacles]. Delete anything unrealistic.
Convert	Convert the final checklist into a calendar plan, reminder script, or message I could send to someone helping me stay accountable.
Wow extension Ask AI to convert the checklist into a calendar plan, reminder script, or parent-friendly explanation.	Debrief What did the AI assume about you? How did adding personal constraints improve the output?

06. Explain It Five Ways

Stage: Comfort Time: 35 minutes Core skill: Requesting multiple representations

Materials: Class topic, AI tool

Goal: Students see that one idea can become many learning formats.

Step-by-step classroom flow

- Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
- Choose a concept from class: fractions, ecosystems, theme, migration, gravity, or media literacy.

3. Students prompt AI to explain it as a plain explanation, analogy, story, step-by-step guide, and quiz.
4. They rate which version helped them most and why.
5. Groups combine the strongest parts into one improved learning resource.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Start	Explain [concept] in five formats: plain explanation, analogy, short story, step-by-step guide, and quiz.
Compare	Compare the five versions. Which one helps memory, which helps understanding, and which would work best for a beginner?
Lesson	Combine the strongest parts into a 15-minute mini-lesson with teacher script, student activity, and exit question.
Wow extension Ask AI to create a teacher-ready mini-lesson that uses all five formats in sequence.	Debrief Which format helped memory? Which format helped understanding? Are those always the same?

Prompt Craft - Show that prompts can be designed, compared, scored, and improved.

07. Common Topic Prompt Tournament

Stage: Prompt Craft Time: 60-90 minutes Core skill: Prompt comparison, scoring, and iteration

Materials: Shared topic, AI tool, scoring rubric

Goal: Students learn that prompts can be evaluated rigorously and improved deliberately.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. The class agrees on one common topic of interest, such as sleep, sneakers, video games, local history, fast food, basketball, or ocean animals.
3. Individually, students write prompts intended to produce the best package of pedagogically useful information on that topic.
4. Students submit prompts, not names, into a capable AI and ask it to score them for clarity, audience fit, constraints, usefulness, and originality.
5. The AI identifies strengths, weaknesses, and likely output problems. Students discuss what the scores reveal about prompting.
6. Then students ask AI to generate stronger prompts for the same topic and compare human and AI-generated versions.
7. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
8. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Student	Create the best possible prompt for teaching [common topic] to [audience]. It should request accurate, useful, beginner-friendly information in a clear format.
Judge	Score these prompts from 0-4 for goal, audience, context, format, and quality check. Identify strengths, weaknesses, and likely output problems: [prompt list].
Upgrade	Generate three stronger prompts for teaching [common topic]. Make one concise, one rigorous, and one creative. Explain the tradeoffs.

Wow extension

Move from a general text answer to a finished product: a PDF explainer, simple website outline, slide deck, interactive quiz, or classroom poster copy.

Debrief

What did the best prompts have in common? What did AI notice that humans missed? What did humans value that AI did not?

08. The Constraint Game

Stage: Prompt Craft Time: 30-45 minutes Core skill: Controlling outputs with limits

Materials: Constraint cards or shared list

Goal: Students learn that constraints can make AI more useful, creative, and precise.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Give every group the same topic and a different constraint card: 100 words, no jargon, table only, humorous tone, three examples, no bullet points, or include counterarguments.
3. Groups run their constrained prompt and paste the result into a shared space.
4. The class guesses which constraint shaped each result.
5. Students revise one output by adding a second constraint.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Start	Explain [topic] for beginners while following this constraint: [constraint].
Add	Revise the answer using these two constraints at once: [constraint 1] and [constraint 2]. Keep the explanation useful.
Reflect	Explain how each constraint changed the output. Which constraint improved clarity, and which made the answer weaker?

Wow extension

Challenge groups to create the most useful one-page beginner guide using exactly five constraints.

Debrief

When did constraints improve quality? When did they make the task worse?

09. Persona Lens Lab

Stage: Prompt Craft Time: 40 minutes Core skill: Using roles and perspectives carefully

Materials: Topic list, role list

Goal: Students explore how assigned roles change AI's choices, vocabulary, and priorities.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Choose one topic with many possible lenses, such as school lunches, electric cars, social media, fashion, or a historical event.
3. Groups ask AI to explain the topic as a scientist, historian, artist, coach, journalist, parent, and student.
4. Students identify what each persona emphasized, ignored, or oversimplified.
5. They build a final prompt that requests multiple perspectives without pretending any one role is neutral.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Start	Explain [topic] from the perspective of a [role]. Name what this perspective emphasizes and what it might miss.
Compare	Explain [topic] through these perspectives: scientist, historian, artist, coach, journalist, parent, and student. Put the differences in a table.
Roundtable	Create a roundtable conversation where each perspective asks one tough question of another perspective.
Wow extension Ask AI to create a roundtable conversation among the personas, with each speaker challenging another speaker's assumptions.	Debrief How can role prompts help? How can they create false authority?

10. Format Switchboard

Stage: Prompt Craft Time: 45 minutes Core skill: Transforming information into useful formats

Materials: A short article, textbook section, or class notes

Goal: Students learn that format is part of thinking.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Provide a short chunk of content or have students generate a basic explanation on a topic.
3. Students ask AI to transform it into a checklist, timeline, FAQ, comparison table, flashcards, and practice quiz.
4. They evaluate which format fits which purpose: studying, teaching, deciding, remembering, or presenting.
5. Each group chooses the best format and improves it for a real audience.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Start	Transform this content into a checklist, timeline, FAQ, comparison table, flashcards, and practice quiz: [content].
Purpose	For each format, explain when a student should use it: studying, teaching, deciding, remembering, or presenting.
Bundle	Create a three-part resource bundle for [audience] using the best formats. Include a short note explaining how to use each part.
Wow extension Create a classroom resource bundle with three formats for the same topic and a note explaining when to use each one.	Debrief What information became clearer when the format changed? What got lost?

11. Bad Prompt Rescue

Stage: Prompt Craft Time: 35 minutes Core skill: Diagnosing weak instructions

Materials: A set of intentionally vague prompts

Goal: Students practice naming prompt problems before trying to fix them.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Give students weak prompts such as "Tell me about history," "Make it good," or "Help with my project."
3. Students label each problem: unclear goal, missing audience, no constraints, no format, too broad, or impossible to judge.
4. They rewrite the prompt using the class rubric.
5. Groups test original and revised prompts side by side.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.

7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Diagnose	Act as a strict but helpful prompt coach. Diagnose what is weak about this prompt: [prompt]. Use labels like unclear goal, missing audience, no constraints, no format, or too broad.
Rewrite	Rewrite the prompt so it has a clear goal, audience, context, constraints, output format, and quality check.
Compare	Compare the original and revised prompts. Predict how the AI answers would differ and why the revised version is stronger.
Wow extension Ask AI to act as a strict prompt coach and explain exactly why each revision improved the likely output.	Debrief Which missing detail was most damaging? How did you know the rescue worked?

12. The Iteration Ladder

Stage: Prompt Craft Time: 45-60 minutes Core skill: Improving through multiple rounds

Materials: AI chat history export or notes

Goal: Students experience AI work as a loop: prompt, inspect, revise, test, refine.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Students begin with a useful but imperfect prompt on a class topic.
3. They make five planned revisions: clarify the goal, define the audience, add examples, set quality criteria, and request a final format.
4. After each AI response, students write one sentence explaining what improved.
5. They submit the first prompt, final prompt, and a short reflection.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

First	Answer this prompt as written, then identify what information you wish the prompt had included: [first prompt].
Revise	Revise my prompt in five rounds: clarify the goal, define the audience, add examples, set quality criteria, and request a final format.
Checklist	Summarize my prompt improvement process as a personal checklist I can reuse before asking AI for help.
Wow extension Ask AI to summarize the student's own improvement process and turn it into a personal prompting checklist.	Debrief Which revision had the biggest effect? Why is the first answer rarely the final product?

Judgment - Build verification, bias awareness, critique, and responsibility.

13. Fact-Check Relay

Stage: Judgment Time: 50-70 minutes Core skill: Verification and source awareness

Materials: AI tool, approved research sources

Goal: Students learn that fluent text still needs evidence.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Students ask AI for a short explanation of a factual topic and require five specific claims.

- Each student highlights the claims and passes them to a partner.
- The partner checks each claim using approved sources and marks it verified, uncertain, misleading, or false.
- Students revise the AI output to include only verified claims and cite where they checked.
- Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
- Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Claims	Explain [factual topic] in 150 words. Then list five specific claims from your answer that a student should verify.
Plan	Create a verification plan for these claims. For each one, name the kind of source needed and what would count as confirmation: [claims].
Revise	Rewrite the explanation using only claims marked verified. Add a short note about what remains uncertain.
Wow extension Ask AI to generate a verification plan before fact-checking, then compare the AI's plan to the class process.	Debrief Did the AI sound confident when it should not have? What makes a claim checkable?

14. Bias and Missing Voices

Stage: Judgment Time: 45-60 minutes Core skill: Identifying omissions and framing

Materials: Topic with social, historical, or cultural dimensions

Goal: Students notice that AI outputs can reflect partial perspectives.

Step-by-step classroom flow

- Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
- Students ask AI for a neutral overview of a topic such as city planning, school uniforms, immigration, sports funding, or technology access.
- They mark whose interests are centered and whose are missing.
- They prompt AI to identify missing stakeholders, possible biases, and questions the first answer did not address.
- Students write a more balanced prompt and compare outputs.
- Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
- Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Overview	Give a neutral overview of [topic]. Then list whose interests, voices, or experiences might be missing from your overview.
Stakeholders	Create a stakeholder map for [topic]. For each stakeholder, name their likely concerns, priorities, and questions.
Balance	Rewrite the original overview so it includes multiple perspectives and avoids pretending that one viewpoint is automatically neutral.
Wow extension Create a stakeholder map showing how different groups might define the problem differently.	Debrief What does "neutral" mean in an AI answer? Who has to decide whether an answer is fair?

15. Hallucination Hunt

Stage: Judgment Time: 35-50 minutes Core skill: Recognizing fabricated or uncertain information

Materials: Teacher-selected prompts with safe verification paths

Goal: Students learn that AI can invent details and that uncertainty is part of responsible use.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Choose topics where details are easy to verify, such as fictional book facts, local history, obscure records, or made-up product names.
3. Students ask AI for confident answers and record any suspicious details.
4. They verify details and classify errors: invented source, wrong date, wrong name, overgeneralization, or unsupported claim.
5. Students rewrite the prompt to require uncertainty labels and source-checking steps.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Answer	Answer this question confidently but mark any detail that may need verification: [question].
Audit	Review your answer and identify possible fabricated details, unsupported claims, wrong dates, wrong names, or overgeneralizations.
Cautious	Rewrite the answer with confidence levels for each claim and a list of details students should verify before trusting it.
Wow extension Ask AI to produce a corrected answer with confidence levels for each claim, then audit those confidence levels.	Debrief Why is confident language persuasive? What prompt language encouraged caution?

16. Debate Coach With Two Sides

Stage: Judgment Time: 50-75 minutes Core skill: Argument analysis and counterargument

Materials: Debatable class question

Goal: Students use AI to strengthen reasoning without outsourcing judgment.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Pairs choose a debatable question with more than one reasonable side.
3. They ask AI to build arguments for Side A and Side B, each with evidence needs and possible weak points.
4. Students mark which points are strong, weak, unsupported, or emotionally persuasive.
5. Pairs prepare a short debate using only the arguments they can explain in their own words.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Sides	Build arguments for both sides of this question: [debatable question]. Include evidence needed and likely weak points for each side.
Cross-exam	Ask Side A three tough questions and Side B three tough questions. Make the questions fair and specific.

Improve	Help us strengthen our argument without adding unsupported claims. Mark each point as strong, weak, emotional, or needing evidence: [argument].	
Wow extension	Use AI as a cross-examiner that asks each side three tough questions after the debate.	Debrief Did AI make either side sound stronger than it deserved? How did you decide what to keep?

17. Rubric Builder

Stage: Judgment Time: 45 minutes Core skill: Defining quality criteria

Materials: A current assignment or project type

Goal: Students learn that quality has dimensions that can be named, discussed, and revised.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Students describe a task, such as a paragraph, poster, presentation, lab report, or video.
3. They ask AI to draft a four-level rubric for the task.
4. Students critique the rubric: What is vague? What is missing? What would be unfair?
5. Groups revise the rubric and test it on a sample piece of work.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Draft	Create a four-level rubric for [assignment type]. Include criteria for accuracy, clarity, evidence, organization, and originality.	
Critique	Critique this rubric for vague language, missing criteria, unfair expectations, and anything students may misunderstand: [rubric].	
Samples	Generate three short sample submissions at different quality levels so students can practice scoring with the rubric.	
Wow extension	Ask AI to generate three sample submissions at different quality levels, then have students score them and defend their scores.	Debrief How did the rubric change the way you understood the assignment?

18. Feedback Without Panic

Stage: Judgment Time: 40-60 minutes Core skill: Using AI for revision feedback

Materials: Student draft without private information

Goal: Students practice receiving feedback as information, not judgment.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Students choose a short draft or paragraph and remove names or private details.
3. They ask AI for feedback using a kind but rigorous teacher voice: two strengths, two priorities, and one concrete next step.
4. Students compare AI feedback with peer feedback and identify overlap.
5. They revise one sentence or paragraph based on feedback they choose to trust.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Feedback	Give kind but rigorous feedback on this draft. Provide two strengths, two revision priorities, and one concrete next step: [safe draft].	
Compare	Compare this AI feedback with peer feedback. Where do they agree, where do they differ, and what should I revise first? [feedback notes].	
Checklist	Create a personalized revision checklist from this draft. Make it short enough to use during a second revision pass.	
Wow extension Ask AI to create a personalized revision checklist from the draft, then use it for a second revision pass.		Debrief Which feedback felt useful? Which feedback was too generic? Who remains responsible for the final choices?

Creation - Turn AI output into artifacts, media plans, data stories, and proposals.

19. Classroom Museum Label

Stage: Creation Time: 45-60 minutes Core skill: Condensing and presenting information

Materials: Objects, images, concepts, or artifacts

Goal: Students turn ordinary classroom material into public-facing explanation.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Each student chooses an object, image, quotation, formula, map, tool, or idea from class.
3. They ask AI to draft a museum label for a general audience in 80-120 words.
4. Students revise for accuracy, voice, and curiosity.
5. They add an audio-tour script, question for visitors, or image-generation prompt if appropriate.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Label	Write an 80-120 word museum label for [object, image, quote, formula, map, tool, or idea]. Use a curious tone for a general audience.	
Audio	Turn the label into a 45-second audio-tour script with one hook, one surprising detail, and one visitor question.	
Revise	Revise the label for accuracy, clarity, and curiosity. Identify any claim that should be checked before display.	
Wow extension Create a mini classroom exhibition with QR codes linking to audio scripts or digital labels.		Debrief How did the audience change the writing? What makes a short explanation powerful?

20. Micro Documentary Kit

Stage: Creation Time: 60-90 minutes Core skill: Planning multimedia storytelling

Materials: Recording device optional, AI tool

Goal: Students see how AI can organize creative production without replacing their voice.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Groups choose a topic that can be explained in two minutes.
3. They ask AI for a documentary plan: hook, interview questions, scene list, narration, and closing question.
4. Students revise the plan to match what they can actually film, draw, photograph, or present.

5. Groups produce a script, storyboard, or short recording.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Plan	Create a two-minute documentary plan for [topic]. Include hook, scene list, interview questions, narration beats, and closing question.
Style	Rewrite the plan in three styles: investigative, playful, emotional, and news-style. Explain which style best fits the topic and why.
Storyboard	Turn the chosen plan into a shot-by-shot storyboard with visuals we can film, draw, photograph, or present.
Wow extension Ask AI to create three alternate documentary styles: investigative, playful, emotional, and news-style. Students choose the best fit.	Debrief What did AI help organize? Where did human judgment and taste matter most?

21. Interactive Study Guide

Stage: Creation Time: 60 minutes Core skill: Building adaptive review materials

Materials: Review topic and AI tool

Goal: Students transform study content into an interactive learning experience.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Students choose a unit topic and ask AI to create a ten-question branching review quiz.
3. Each answer choice should trigger feedback and a next step: easier question, harder question, hint, or explanation.
4. Students test the quiz with a partner and mark confusing questions.
5. They revise the quiz so wrong answers teach rather than shame.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Quiz	Create a ten-question branching review quiz for [unit topic]. Each answer choice should trigger feedback and a next step.
Repair	Review this quiz for confusing questions, weak feedback, or wrong-answer explanations that shame the learner: [quiz].
Convert	Convert the quiz into a simple website outline, slide deck flow, or chatbot-style script.
Wow extension Ask AI to convert the branching quiz into copy for a simple website, slide deck, or chatbot-style script.	Debrief How is an interactive guide different from a worksheet? What makes feedback helpful?

22. Data Story From Scratch

Stage: Creation Time: 70-100 minutes Core skill: Collecting, analyzing, and explaining data

Materials: Short class survey, spreadsheet optional

Goal: Students use AI to turn small data into a responsible story.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. The class designs a quick survey with safe, non-private questions.

- Students collect anonymous totals and enter them into a table.
- They ask AI to identify patterns, possible charts, and cautious conclusions.
- Students write a data story that includes at least one limitation.
- Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
- Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Survey	Help us design a short anonymous class survey about [safe topic]. Keep questions non-private and easy to total.
Analyze	Analyze this small class data table. Identify patterns, possible charts, cautious conclusions, and limitations: [data].
Infographic	Create an infographic outline with title, chart labels, key takeaway, and one warning against overclaiming.
Wow extension Ask AI to produce an infographic outline, including title, chart labels, key takeaway, and a warning against overclaiming.	Debrief What can small data show? What can it not show?

23. Local Problem Pitch

Stage: Creation Time: 75-120 minutes Core skill: Problem solving and proposal design

Materials: School or community issue list

Goal: Students use AI to think through solutions, stakeholders, risks, and tradeoffs.

Step-by-step classroom flow

- Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
- Groups identify a real school or community problem they care about.
- They ask AI to create a stakeholder map, causes, possible solutions, and questions to investigate.
- Students choose one solution and prompt AI for a one-page proposal with benefits, risks, resources, and first steps.
- Groups revise the proposal based on what they know locally.
- Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
- Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Map	Create a stakeholder map, causes list, possible solutions, and investigation questions for this school or community problem: [problem].
Proposal	Draft a one-page proposal for this solution: [solution]. Include benefits, risks, resources, first steps, and questions for local experts.
Pitch	Turn the proposal into a five-slide pitch deck outline, a flyer draft, or an email to a decision-maker.
Wow extension Create a pitch deck, flyer, email to a decision-maker, or prototype plan from the same proposal.	Debrief What did AI know generally? What did only your class know locally?

24. Translation and Accessibility Lab

Stage: Creation Time: 45-60 minutes Core skill: Adapting communication for access

Materials: A teacher-provided text

Goal: Students learn that AI can help include more readers when guided thoughtfully.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Provide a dense paragraph, announcement, or short lesson text.
3. Students ask AI to adapt it for a younger reader, multilingual family, audio script, and visual learner.
4. Students check whether meaning stayed accurate and respectful.
5. They revise one version to be clearer, warmer, and more useful.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Adapt	Adapt this text for four audiences: younger reader, multilingual family, audio listener, and visual learner: [text].
Check	Check whether the adapted versions kept the meaning accurate, respectful, and clear. Flag anything a human should review.
Kit	Create a communication kit with plain-language version, translation draft for human review, audio script, and image prompt.
Wow extension Create a communication kit: plain-language version, translated draft for human review, audio narration script, and image prompt.	Debrief What is the difference between simplifying and dumbing down? Why does human review matter for translation?

Wow Build - Chain tools into personalized coaches, websites, app ideas, and capstones.

25. Personal Learning Coach Simulation

Stage: Wow Build Time: 45-60 minutes Core skill: Personalized planning with critique

Materials: Student-selected learning goal

Goal: Students see AI personalization as a draft to evaluate, not a command to obey.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Students choose a learning goal for the next week: vocabulary, typing, fitness, reading, coding, art, or test review.
3. They describe available time, current level, resources, obstacles, and motivation.
4. AI creates a seven-day plan with checkpoints and encouragement.
5. Students critique the plan for realism and revise it into something they would actually try.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Plan	Create a seven-day beginner learning plan for this goal: [goal]. Use my time, current level, resources, obstacles, and motivation: [details].
Adjust	Revise the plan to be more realistic. Remove anything too hard, too long, or too vague, and add checkpoints.
Coach	Act as a daily coach. Ask me what I completed, adjust tomorrow's plan, and celebrate evidence of effort without exaggerating.

Wow extension

Ask AI to become a daily coach that checks progress, adjusts the plan, and celebrates evidence of effort.

Debrief

What made the plan feel personal? What did AI still not know about your real life?

26. No-Code Website Blueprint

Stage: Wow Build Time: 75-120 minutes Core skill: Turning knowledge into a web experience

Materials: AI tool and optional simple website builder

Goal: Students move from text output to a structured digital product.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Students choose a topic worth teaching to others.
3. They ask AI for a simple website plan: audience, pages, section headings, visual ideas, and calls to action.
4. They prompt AI to write concise page copy and a navigation structure.
5. If tools allow, students use a website builder or simple HTML template to assemble a prototype.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Plan	Create a simple website plan for teaching [topic] to [audience]. Include pages, section headings, visual ideas, and calls to action.
Copy	Write concise page copy for the website. Keep it beginner-friendly and mark any claims that need verification.
Interactive	Add one interactive feature idea: quiz, decision tree, calculator, glossary filter, or choose-your-path guide. Explain how it works.
Wow extension	Debrief
Ask AI to add an interactive element: quiz, decision tree, calculator idea, glossary filter, or choose-your-path guide.	How did the product change when the audience became a website visitor rather than a teacher?

27. AI Tool Chain Challenge

Stage: Wow Build Time: 60-90 minutes Core skill: Chaining outputs across formats

Materials: AI tool, design or presentation tool optional

Goal: Students experience AI as part of a production pipeline.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Groups choose one idea, message, or lesson.
3. They generate a clear source explanation and verify it.
4. They transform the source into five products: article, poster copy, podcast script, quiz, and slide outline.
5. Groups evaluate which transformation best serves the audience and improve it.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Source	Create a clear, verified source explanation about [idea, message, or lesson]. Include claims to check before reuse.
Transform	Transform the source into five products: article, poster copy, podcast script, quiz, and slide outline.

Style	Create a consistent campaign theme, tagline, and style guide so all five products feel connected.	
Wow extension	Ask AI to create a consistent campaign theme, tagline, and style guide for all five products.	Debrief Which outputs were easiest to transform? How did consistency help or hurt creativity?

28. Socratic Seminar With AI Observer

Stage: Wow Build Time: 60-80 minutes Core skill: Analyzing discussion quality

Materials: Discussion notes, not student names

Goal: Students use AI to reflect on a real conversation while protecting privacy.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Hold a short seminar on a rich question.
3. A student note-taker records themes, claims, evidence, questions, and moments of disagreement without names.
4. The class gives the anonymized notes to AI and asks for themes, missing questions, strongest evidence, and next discussion moves.
5. Students compare the AI analysis with their own experience of the conversation.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Analyze	Analyze these anonymous seminar notes. Identify themes, claims, evidence, questions, disagreements, and missing voices: [notes].	
Next	Create a follow-up seminar plan that deepens the discussion and includes quieter voices.	
Reflect	Compare the AI analysis with our class experience. What can be seen in notes, and what classroom context might be missing?	
Wow extension	Ask AI to create a follow-up seminar plan that deepens the discussion and includes quieter voices.	Debrief What can AI notice from notes? What can it not notice about tone, courage, or classroom context?

29. Mini App Design Sprint

Stage: Wow Build Time: 90-150 minutes Core skill: Design thinking and prototyping

Materials: AI tool, paper prototyping materials, optional coding tool

Goal: Students discover that AI can help turn a need into a prototype plan.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Groups identify a small classroom problem: tracking assignments, choosing groups, practicing vocab, planning projects, or managing study time.
3. They ask AI for user stories, essential features, screens, and a simple workflow.
4. Students sketch the app and ask AI to critique the design for a beginner user.
5. If appropriate, AI can draft simple code or no-code setup instructions for a prototype.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Users	Help us design a mini app for this classroom problem: [problem]. Create user stories, essential features, screens, and a simple workflow.	
Critique	Critique our paper prototype for a beginner user. Identify confusing steps, missing feedback, and unnecessary features: [prototype notes].	
Test	Create a usability test script with tasks, observation criteria, and questions for the tester after they try the prototype.	
Wow extension Run a usability test: one group uses another group's prototype while AI-generated criteria guide the observation.		Debrief How did AI help you think like a designer? What did testing reveal that prompting alone could not?

30. From Question to Public Product

Stage: Wow Build Time: 2-4 class periods Core skill: Capstone inquiry and publication

Materials: Research sources, AI tool, presentation or publishing tool

Goal: Students combine prompting, verification, revision, creation, and reflection into one finished artifact.

Step-by-step classroom flow

1. Frame the activity goal, name the safe-input boundary, and show the artifact students will produce.
2. Students begin with a question they genuinely care about.
3. They build a research prompt, verify key claims, and revise the prompt based on what they learn.
4. They create a final product for a real audience: PDF guide, website, slide deck, video plan, interactive quiz, podcast script, or proposal.
5. They include a process note showing their first prompt, best prompt, verification steps, and final human decisions.
6. Give students two minutes to mark what improved, what became confusing, and what they still need to verify.
7. Have students save the first prompt, best prompt, final output, and one human decision they made.

Copy-ready prompts

Research	Turn this question into a research plan: [question]. Include subquestions, search terms, source types, and claims to verify.	
Product	Help me choose the best final product for this audience: PDF guide, website, slide deck, video plan, quiz, podcast script, or proposal. Explain the tradeoffs.	
Process	Create a process note template showing first prompt, best prompt, verification steps, human decisions, and final product purpose.	
Wow extension Hold a gallery walk where students present not only the product but the AI collaboration path that got them there.		Debrief What can AI amplify when a human has a real question, clear standards, and responsibility for the final result?

Teacher Closing Moves

A beginner AI classroom becomes powerful when students can name what changed between their first attempt and their final product. End major activities by asking students to show their process, not only the output.

Exit Ticket Options

- My first prompt was weak because...
- The revision that helped most was...
- One AI claim I verified or questioned was...

- One choice I made that the AI could not make for me was...
- Next time, I will prompt more clearly by...

Simple Student Reflection

In five sentences, explain what you asked AI to do, how you improved your prompt, what you checked, what you changed by human judgment, and what your final product helps someone understand or do.
