

Monthly AI Office Hours

A recurring learning forum for questions, tool changes, workflow practice, and steady coaching as AI habits mature.

Format	Monthly 60-minute Zoom sessions with question collection and lightweight follow-up notes.
Level	Ongoing level: sustained fluency and habit support
Audience	Teams that have completed an initial training and want continuity without turning AI into a separate project.

Learner outcomes

- Create a reliable place for practical questions and safe experiments.
- Reinforce good review habits as tools, interfaces, and model capabilities change.
- Turn scattered individual experiments into shared team learning.
- Maintain momentum without forcing AI into every workflow or chasing every announcement.

Guiding questions

- What did people try this month, and what happened?
- Which tool changes matter for this team, and which can be ignored for now?
- Where are review habits holding up, and where are outputs being trusted too quickly?
- What one practice should the team try before the next office hours session?

Readiness checks

- Participants bring real but non-sensitive questions and examples.
- The team can separate useful tool changes from noise.
- Repeated questions are converted into shared guidance or workflow notes.
- Office hours reinforce boundaries rather than encouraging careless experimentation.

Research-backed adoption practices

- Use recurring office hours as a learning system: collect questions, compare examples, update norms, and share what changed.
- Reward useful observations about failures and confusing outputs, not only successful prompts.
- Translate tool changes into work implications so people are not forced to chase every announcement.
- Revisit boundaries as tools gain new file, memory, browsing, coding, or agent capabilities.

Curriculum modules

Question intake

Each session starts with real questions, confusing moments, and examples from the previous month.

Tool-change translation

New AI features are explained in plain language, with emphasis on what is actually useful for the group.

Live workflow coaching

Participants work through non-sensitive scenarios and see how a workflow can be improved step by step.

Habit reinforcement

Each month ends with one or two practical habits the team can try before the next session.

Learning capture

Useful examples, cautions, and workflow refinements are captured so the team builds institutional memory over time.

Session flow

Collect

Gather questions, examples, confusing moments, and useful experiments from the previous month.

Translate

Explain relevant tool changes in practical language and ignore updates that do not affect the group.

Coach

Work through live non-sensitive examples, improving prompts and review habits together.

Capture

Document useful patterns, cautions, and candidate workflows.

Assign

Choose one small practice experiment for the next month.

Practice labs

Question clinic

Turn participant questions into better prompts, safer examples, and clearer review steps.

Tool-change translation

Assess one new AI feature and decide whether it changes actual practice for the team.

Workflow rescue

Take an AI experiment that disappointed someone and diagnose whether the issue was prompt, context, task choice, or overtrust.

Monthly habit drill

Practice one review or revision habit until it becomes easy enough to use in ordinary work.

1-2 hour utility projects

These short projects are designed to help individuals experience practical AI utility while keeping inputs safe and human review visible.

How to choose a strong first project

- Real work, low risk: choose a task people already recognize, but keep inputs public, fictional, or sanitized.
- Clear walk-away artifact: produce a brief, agenda, checklist, glossary, comparison table, or reusable prompt sequence.
- Visible judgment step: check claims, name uncertainty, revise tone, or decide what should remain human-led.
- Transferable habit: practice a pattern the learner can reuse later, such as giving context, comparing outputs, or verifying before relying.

Learning Sprint (60-75 minutes)

Turn a confusing topic into a private tutor session.

Walk-away artifact: A one-page explainer, a short quiz, a glossary, and a list of what to verify elsewhere.

Safe input: Use a public topic, a public article, or a concept you want to understand. Avoid private client, patient, employee, or proprietary material.

- Ask for a plain-language explanation at your current level.
- Request examples, analogies, common misconceptions, and a five-question quiz.
- Ask what claims need source checking before you rely on them.

Starter prompt: Teach me [topic] as a smart beginner. Start with a plain-language explanation, then give examples, common misconceptions, a short glossary, a five-question quiz, and a list of claims I should verify with reliable sources.

Decision Clarity Brief (75-90 minutes)

Use AI to make a decision easier to think about without outsourcing the decision.

Walk-away artifact: A comparison table, assumptions list, pre-mortem, missing-information checklist, and final decision questions.

Safe input: Use a personal, public, fictional, or sanitized decision. Keep confidential finances, contracts, medical, legal, or customer details out of public tools.

- Describe the options, constraints, values, and what would count as success.
- Ask AI to compare options and surface assumptions instead of choosing for you.
- Run a pre-mortem and identify what a human should check before acting.

Starter prompt: Help me think through this decision without deciding for me: [safe decision context]. Create criteria, compare options, name assumptions, run a pre-mortem, list missing information, and end with questions I should answer myself.

Meeting Prep Kit (60-90 minutes)

Turn a rough meeting idea into a more useful conversation.

Walk-away artifact: A meeting agenda, prep questions, likely tensions, decision points, and a follow-up email template.

Safe input: Use fictional or sanitized meeting context. Do not paste private attendee notes, personnel details, patient data, customer records, or proprietary plans into public tools.

- Give AI the purpose, audience, desired outcome, and any safe background.
- Ask for an agenda, questions, risks, and decisions to clarify.
- Revise the agenda for tone, time, and who needs to review it.

Starter prompt: Using this fictional or sanitized meeting context, create a focused agenda, prep questions, likely tensions, decision points, and a follow-up email template. Mark anything that needs human confirmation: [context].

Writing Upgrade Studio (60 minutes)

See how AI can draft, critique, and revise with you in a loop.

Walk-away artifact: A stronger email, memo, bio, announcement, or short article with a revision history and review checklist.

Safe input: Use a rough draft that contains no sensitive personal, client, patient, employee, legal, financial, or proprietary details.

- Ask for a first rewrite for a specific audience and tone.
- Ask AI to critique its own draft for clarity, claims, tone, and missing context.
- Request a final revision and make the last edits yourself.

Starter prompt: Improve this rough draft for [audience] with a [tone] tone. Then critique your revision for clarity, unsupported claims, missing context, and anything a human should verify before sending: [safe draft].

Research Compass (90-120 minutes)

Use AI to plan research before you read, search, or cite.

Walk-away artifact: A research question map, search terms, source categories, red flags, and verification plan.

Safe input: Use a public topic or general business question. Do not ask AI to invent citations or make final claims without sources.

- Ask AI to turn a broad topic into better questions and search terms.
- Request source categories, possible biases, and missing perspectives.
- Use the output as a reading plan, then verify claims in actual sources.

Starter prompt: Help me plan research on [public topic]. Create key questions, search terms, source types to seek, likely blind spots, red flags, and a verification checklist. Do not make final claims without sources.

Workflow Recipe Builder (90-120 minutes)

Turn one repeated task into a reusable AI-assisted workflow.

Walk-away artifact: A workflow recipe with inputs, prompt sequence, review gates, human owner, and when-not-to-use guidance.

Safe input: Choose a recurring task and describe it generally or with fictional examples. Keep sensitive operational data out of public tools.

- Map the task into steps, inputs, outputs, review points, and handoffs.
- Ask AI where it can help and where human judgment should stay in charge.
- Create a repeatable prompt sequence and a review checklist.

Starter prompt: Turn this recurring task into a safe AI-assisted workflow recipe: [task]. Include purpose, safe inputs, prompt sequence, review checkpoints, human decision points, risks, and when not to use AI for this task.

Professional Profile Refresh (75-90 minutes)

Use AI as a coach for describing your work more clearly.

Walk-away artifact: A refreshed bio, resume bullet options, interview talking points, and confidence-building practice questions.

Safe input: Use a sanitized career summary or fictionalized role description. Do not include private employer data, references, compensation, or confidential projects.

- Give AI a safe summary of your work, audience, and desired tone.
- Ask for clearer positioning, bullet options, and examples of evidence to add.
- Roleplay interview questions and revise anything that feels inflated or inaccurate.

Starter prompt: Using this sanitized professional summary, help me describe my work more clearly. Draft a short bio, five resume bullet options, three interview talking points, and questions I should answer to make the claims more accurate: [summary].

Personal Planning Co-Pilot (60-75 minutes)

Use AI to turn vague goals into a realistic plan you can actually follow.

Walk-away artifact: A one-week plan, prioritized task list, obstacle plan, review ritual, and next-action checklist.

Safe input: Use personal goals and constraints that are not private, medical, financial, legal, or deeply sensitive.

- Describe the goal, constraints, time available, and what has made it hard.
- Ask AI for a practical plan with tradeoffs and small next actions.
- Review the plan yourself and remove anything unrealistic or intrusive.

Starter prompt: Help me turn this goal into a realistic one-week plan: [safe goal]. Ask clarifying questions if needed, then create priorities, daily actions, likely obstacles, a review ritual, and a simple checklist.

Tangible cases

Prompt that failed

Situation: A team member tried AI for a harmless task, but the result was generic, wrong, or too confident.

Learner task: Diagnose whether the issue was task choice, missing context, weak constraints, or insufficient review.

Starter prompt: Diagnose why this AI attempt failed. Classify the likely issue as task choice, missing context, unclear constraints, weak examples, overtrust, or review failure. Suggest a safer revised prompt: [failed prompt and output].

New feature translation

Situation: A model or product announces a new feature, and the team is unsure whether it matters.

Learner task: Translate the change into practical implications, ignore the noise, and name any new boundaries.

Starter prompt: Explain this AI tool update for a cautious team. What changed, what might be useful, what should we ignore for now, what risks or boundaries remain, and what small safe experiment could we try? [update].

Shared learning capture

Situation: Several staff members are experimenting privately, but the organization is not learning from those experiments.

Learner task: Convert individual examples into shared guidance, question lists, workflow notes, and follow-up topics.

Starter prompt: Turn these monthly AI practice notes into a team learning recap. Include useful patterns, confusing moments, unsafe ideas to avoid, workflows to revisit, and questions for next office hours: [practice notes].

Prompt library

Question refinement

Turn this messy AI question into a clearer office-hours question. Identify the real task, missing context, data boundaries, and what kind of answer would be useful: [question].

Workflow rescue

Rescue this disappointing AI workflow. Identify where it broke down, rewrite the prompt sequence, add review checkpoints, and say when the task should stay human-led: [workflow].

Tool-change digest

Summarize this AI tool change for a practical team. Use three sections: what changed, who should care, and what to test safely next month: [announcement].

Monthly recap

Create a one-page office-hours recap from these notes. Include questions answered, examples discussed, practice habit, cautions, and items to revisit next month: [notes].

Materials to develop

- Monthly question intake form
- Office-hours recap template
- Tool-change digest format
- Team practice log
- Workflow refinement log
- Reusable question bank

Diagram candidates

These are intentionally left as candidate visuals until diagram parameters are chosen.

- Monthly learning loop
- Question-to-practice coaching flow
- Office-hours knowledge capture cycle

Follow-up work

- Try the monthly practice habit with one safe task.
- Submit questions or examples before the next session.
- Update shared notes with what worked, what failed, and what needs clearer guidance.

Session design reminders

- Keep examples non-sensitive and realistic.
- Emphasize education, judgment, review, and careful experimentation.
- Do not promise legal, medical, compliance, cybersecurity, or automation outcomes.
- Name when a stronger tool, private environment, or policy decision is needed before proceeding.

API and tool boundary

This curriculum companion does not require an API call. Any secure password protection, private client portal, or live AI workflow exercise that transmits data to an external model should be reviewed before implementation.
